

# Ameba & Alexa Workshop

**This is the workshop for Ameba® development with Amazon Alexa. Each participant learned to use Ameba development board and its DSP expansion board to create his/her own voice service.**

\*Ameba® is a programmable platform for developing IoT applications by the Realtek semiconductor.

**Mr. Ke from Makerpro is the keynote speaker. His talks include:**

- (1) how to connect Ameba development board with Amazon web service, and**
- (2) how to build a personal voice service on Amazon developer platform.**

**Each participant also demonstrated a smart IoT project of his/her own idea in the afternoon session. Student's unlimited novelty and maker spirit into engineering works were fully excited in a social event.**
